

NutriBox Portfolio Case Study Blueprint

Purpose

This document is a blueprint for building an interactive case study directly inside a portfolio website instead of creating a traditional PDF. It summarizes the recommended structure discussed for the NutriBox project and complements the existing project guide rather than replacing it.

1. Hero

Large product mockup, project title, subtitle, role, duration, tools, CTA.

2. Project Overview

Problem, solution, responsibilities, deliverables.

3. Challenge

Explain business and UX problems.

4. Goals

Business, user and design goals.

5. Brand Identity

Logo, colours, typography, tone of voice.

6. Moodboard

Packaging, photography, textures and references.

7. Design System

Colours, spacing, buttons, chips, components.

8. Wireframes

Low fidelity to final UI evolution.

9. Hero Evolution

Show iterations with design rationale.

10. Final UI

Desktop, tablet and mobile showcase.

11. Product Showcase

Explain product cards and interactions.

12. Responsive Design

Adaptive layouts for desktop and mobile.

13. Design Decisions

Explain hierarchy, colours, typography and trust.

14. Outcome

Skills demonstrated and project impact.

15. Reflection

Lessons learned and future improvements.

16. Next Project CTA

Guide visitors to another portfolio project.

Interactive Ideas

Use scroll storytelling, subtle motion, before/after comparisons, sticky navigation, responsive device mockups, hover states, and component demos instead of long text blocks.

Future Expansion

Create a comprehensive UX case study later with research, personas, competitor analysis, accessibility audit, metrics, and detailed process documentation. This aligns with the planning and branding foundations in the uploaded NutriBox project guide. ■filecite■turn1file0■
